Todd Landman*
 University of Nottingham

The first part of the book is devoted to a general introduction to the theory of
 differential equations. The author starts with the basic definitions and
 properties of solutions, then proceeds to the study of linear and
 nonlinear equations. The second part is devoted to the study of
 systems of differential equations. The author discusses the existence
 and uniqueness theorems, the stability theory, and the theory of
 bifurcations. The third part is devoted to the study of partial
 differential equations. The author discusses the basic types of
 partial differential equations, the method of separation of variables,
 and the theory of boundary value problems. The fourth part is
 devoted to the study of integral equations. The author discusses the
 basic types of integral equations, the Fredholm theory, and the
 theory of Volterra equations. The fifth part is devoted to the study
 of the theory of differential equations in the complex plane. The
 author discusses the theory of Fuchsian equations, the theory of
 Painlevé equations, and the theory of differential equations with
 irregular singular points. The sixth part is devoted to the study
 of the theory of differential equations in the theory of
 dynamical systems. The author discusses the theory of flows, the
 theory of vector fields, and the theory of differential equations in
 the theory of dynamical systems. The seventh part is devoted to
 the study of the theory of differential equations in the theory of
 control systems. The author discusses the theory of linear control
 systems, the theory of nonlinear control systems, and the theory of
 differential equations in the theory of control systems. The eighth
 part is devoted to the study of the theory of differential equations
 in the theory of quantum mechanics. The author discusses the
 theory of the Schrödinger equation, the theory of the Dirac
 equation, and the theory of differential equations in the theory of
 quantum mechanics. The ninth part is devoted to the study of the
 theory of differential equations in the theory of relativity. The
 author discusses the theory of the Einstein field equations, the
 theory of the geodesic equation, and the theory of differential
 equations in the theory of relativity. The tenth part is devoted to
 the study of the theory of differential equations in the theory of
 string theory. The author discusses the theory of the string
 equation, the theory of the worldsheet action, and the theory of
 differential equations in the theory of string theory.

1.0. The author is grateful to the following persons for their
 assistance in the preparation of this book: ...

pology and social work, and for those who generally seek greater resources in participant-observer methodologies and community based advocacy.

Katharine G. Young*

Professor, Boston College Law School

* Katharine G. Young is Professor of Law at Boston College Law School. She is the author of *Constituting Economic and Social Rights* (Oxford University Press, 2012), and the edited collections, *The Public Law of Gender* (Cambridge University Press, 2016, with Kim Rubenstein), and *The Future of Economic and Social Rights* (Cambridge University Press, 2019). She completed her SJD at Harvard Law School, where she was a Fellow at Harvard University's Project on Justice, Welfare and Economics and her B.A./LL.B. (Hons) at the University of Melbourne. She is currently editing, with Malcolm Langford, *The Oxford Handbook of Economic and Social Rights*.
